

EIZO Announces Support for MAC OS X with OsiriX^{PRO}

Cypress, CA, May 15, 2008 – Eizo Nanao Technologies Inc. (EIZO) today announced MAC OS X support for their full line of medical LCD monitors using the aycan workstation OsiriX^{PRO} software. EIZO's RadiForce and FlexScan MX Series monitors¹ are now supported on the Mac platform in collaboration with this software. OsiriX^{PRO} is an advanced image processing tool and a DICOM PACS workstation in one. This continuous synergy between EIZO and aycan and allows users of OsiriX^{PRO} to take advantage of the full range of quality medical imaging LCD displays from EIZO to further improve their workflow.

EIZO monitors and Aycan workstation OsiriX^{PRO} work seamlessly with MAC OS X offering the medical industry a stable imaging solution for the Mac platform. EIZO LCD monitors are DICOM compliant and work collaboratively to deliver a fully DICOM compatible workflow. EIZO offers users many more monitor options for viewing bright and stable images as well as multiple graphics card choices and workstation configurations to meet their specific needs.

Like many of EIZO's monitor solutions, Aycan's workstation OsiriX^{PRO} is a FDA 510(K) cleared workstation for reviewing, diagnosis, and post-processing of multimodality and multidimensional images like 2D/3D/4D/5D: derived of the OsiriX open source project . Their 3D viewer offers all modern rendering modes: Multiplanar Reconstruction(MPR), Surface Rendering, Volume Rendering and Maximum Intensity Projection(MIP) and in conjunction with EIZO's 2MP, 3MP, or 4MP color monitors will execute the best imaging for all of these modalities.

EIZO understands there are users in the medical imaging field using Mac either in their facilities or for their home office. EIZO has prepared color profiles for easy set-up on Mac OS X for all our color monitors. These are available for download on the EIZO website. EIZO has been working with the OsiriX solution internationally since November of last year and the companies have exhibited together at conventions overseas and collaborated at RSNA 2007 in the aycan booth using wide format 24" FlexScan monitors.

EIZO's line up offers an array of useful features like²;

- Digital Uniformity Equalizer function which provides optimum backlight luminance from corner to corner of the screen.
- High brightness and contrast solutions for improved sharpness of images.
- Paired monitors can be purchased and come bundled in one box as a pair.
- Monitors that have 13-bit look up tables for higher definition in medical imaging.
- 5 year warranties on all new models.
- Factory DICOM pre-calibrated.
- Patented brightness stabilization system for consistent image reproduction.
- Image Rotation function for hardware-based switching between landscape and portrait mode on RadiForce monitors.

- Compliance with stringent medical, safety, and EMC emissions standards including FDA 510(k), TÜV/GM, the CE Medical Device Directive, and UL60601-1 on RadiForce diagnostic monitors.

Availability and Requirements

EIZO monitors are available and can be purchased through Aycan or any of our nationwide resellers. You can learn more about the solution by stopping by EIZO's booth at SIIM 2008 at the Washington State Convention Center in Seattle, WA (**Booth 219**). SIIM runs from May 15-17.

Osirix PRO for MAC OS X requires Mac OS X Leopard or MAC OS X Tiger version 10.4.11 or later.

About EIZO
